

HAZWOPER: Understanding Chemical Hazards Training

This online training video shows students how proper knowledge and safe-handling techniques are a must when using hazardous chemical substances to avoid risky situations and accidents.

The online training video shows students awareness is first and foremost in workplace safety. Students learn how to use guides such as Material Safety Data Sheets, container labels and a company's hazard communication program for even seemingly harmless items like cleaners and solvents. The video gives examples of how information can make work safe from hazards posed by toxic substances, irritants, combustibles, flammables, corrosives and carcinogens.

The program addresses the varying degrees to which workers are affected by chemicals, the qualities that can further a chemical's hazards and the language used to describe these factors. What to do in case of exposure is also addressed in the video program with a focus on ingestion, inhalation, exposure to eyes, and splashes and spills.

- Full-screen video presentation
- Print certificate of completion
- You have 7 days to complete the course

Audience

Workers who use or may be exposed to hazardous chemical substances

Topics

The course presents the following topical areas:

- Introduction
- MSDS
- Labels
- HAZMAT Terms
- Toxic Substances
- Corrosives & Irritants
- Flammables & Combustibles
- Carcinogens
- PPE & Chemical Storage
- Exposure Situations
- Handling Spills
- Review
